MA-SqueezeliteBrowse: menu walkthrough

Squeezebox Radio (UE2)

Screens of a Logitech Squeezebox Radio (SqueezePlay, 320x240) browsing Music Assistant 2.10.6 with the patched Squeezelite provider. The same steps as the piCorePlayer deck, captured on 2026-10-14 by a macro running inside the Radio's own software, including the menus a long press opens. The content shown is a moment in time: it follows the library, the presets and the Home Assistant labels.

Main Menu

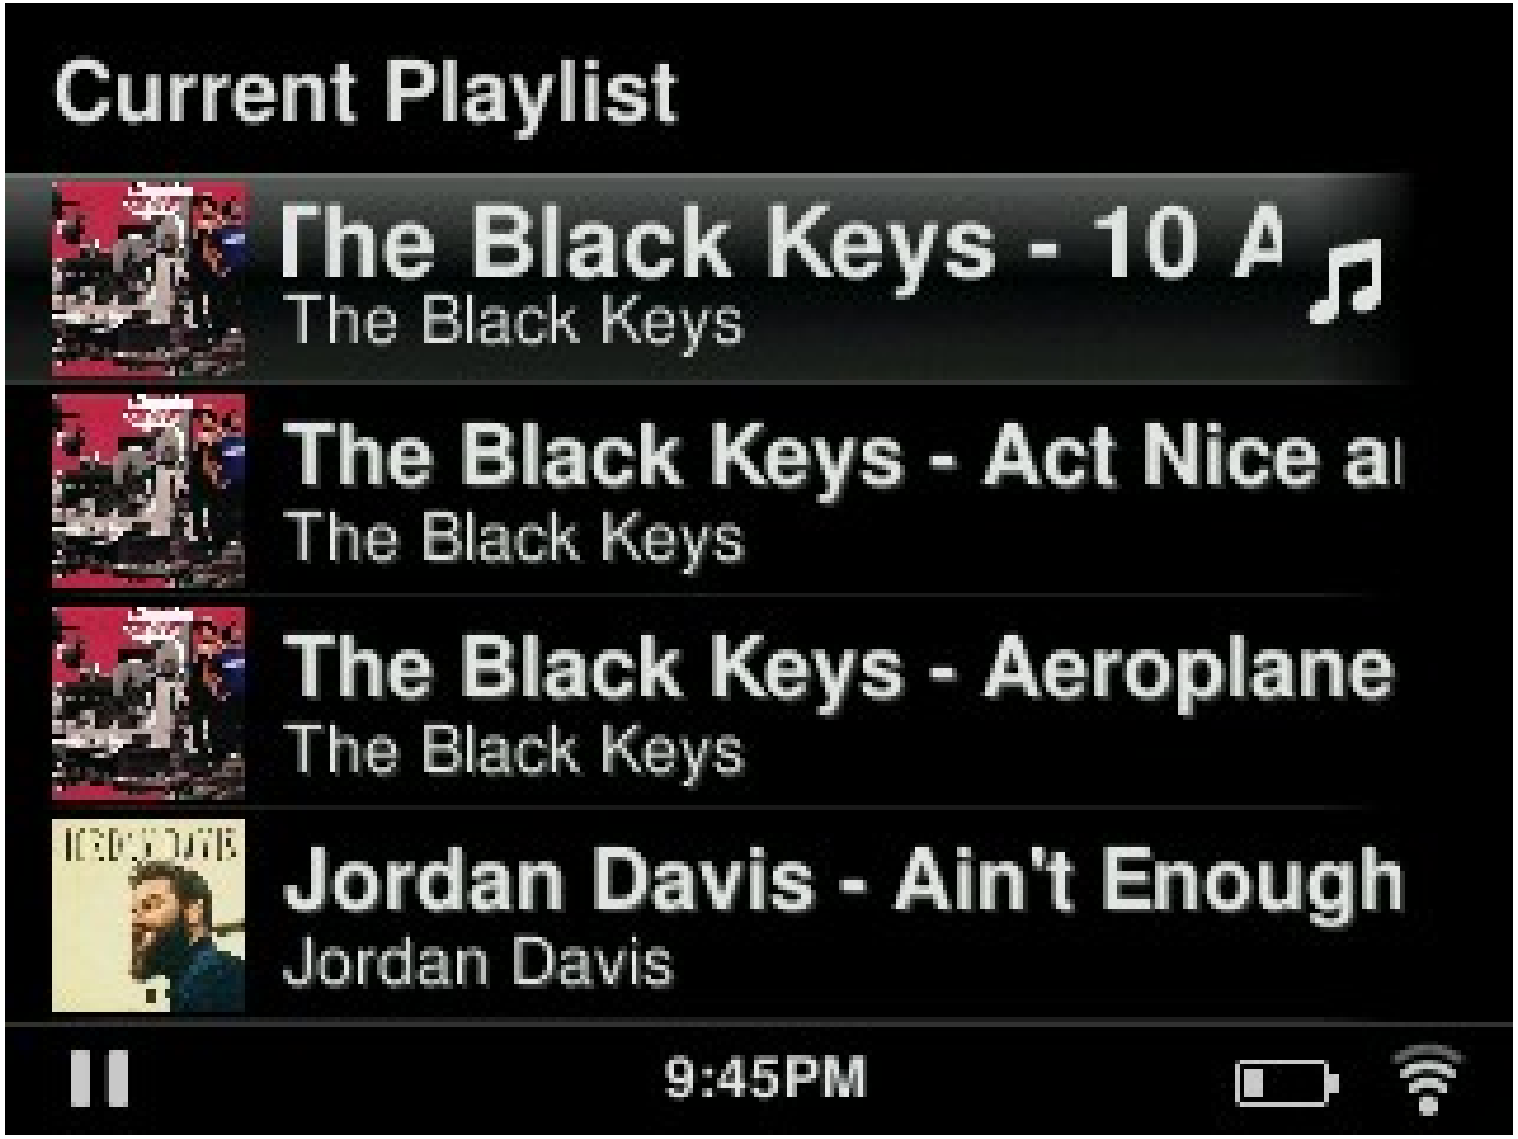

Home screen. Settings holds the HA Extras entry when it is enabled for the device.

Now Playing

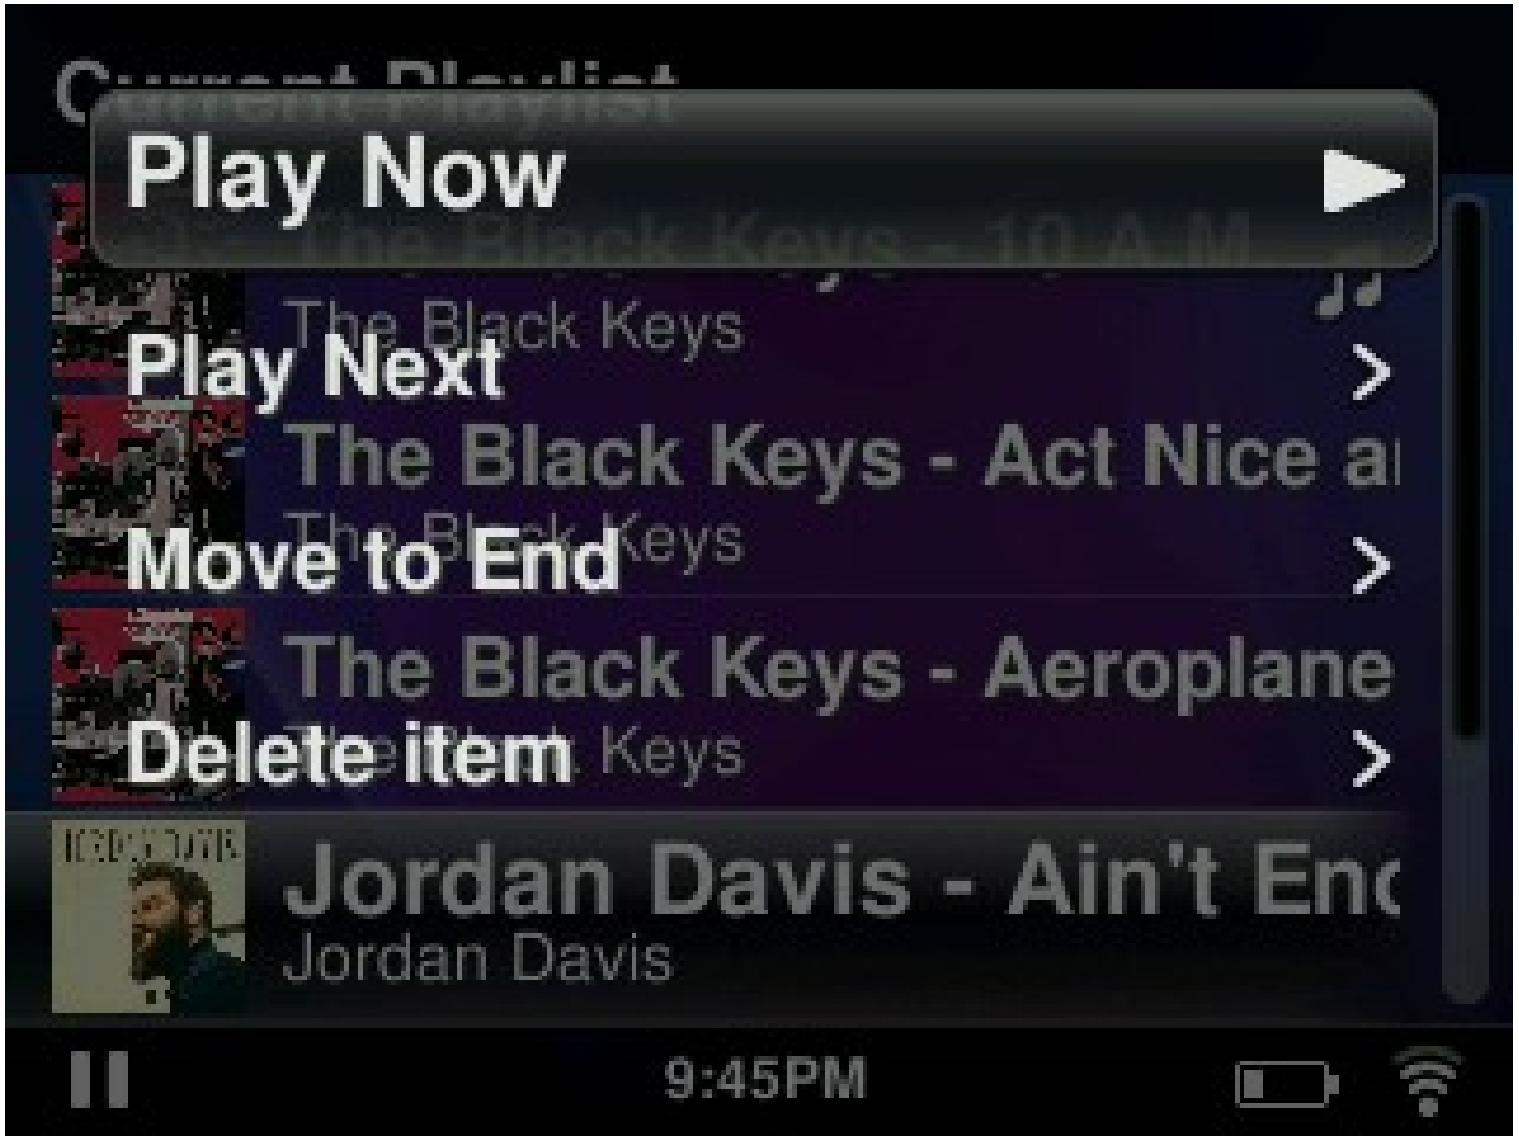

Shows the current track from the Music Assistant queue.

Queue (Current Playlist)

The player's queue as Music Assistant has it.

Long press on a queue item

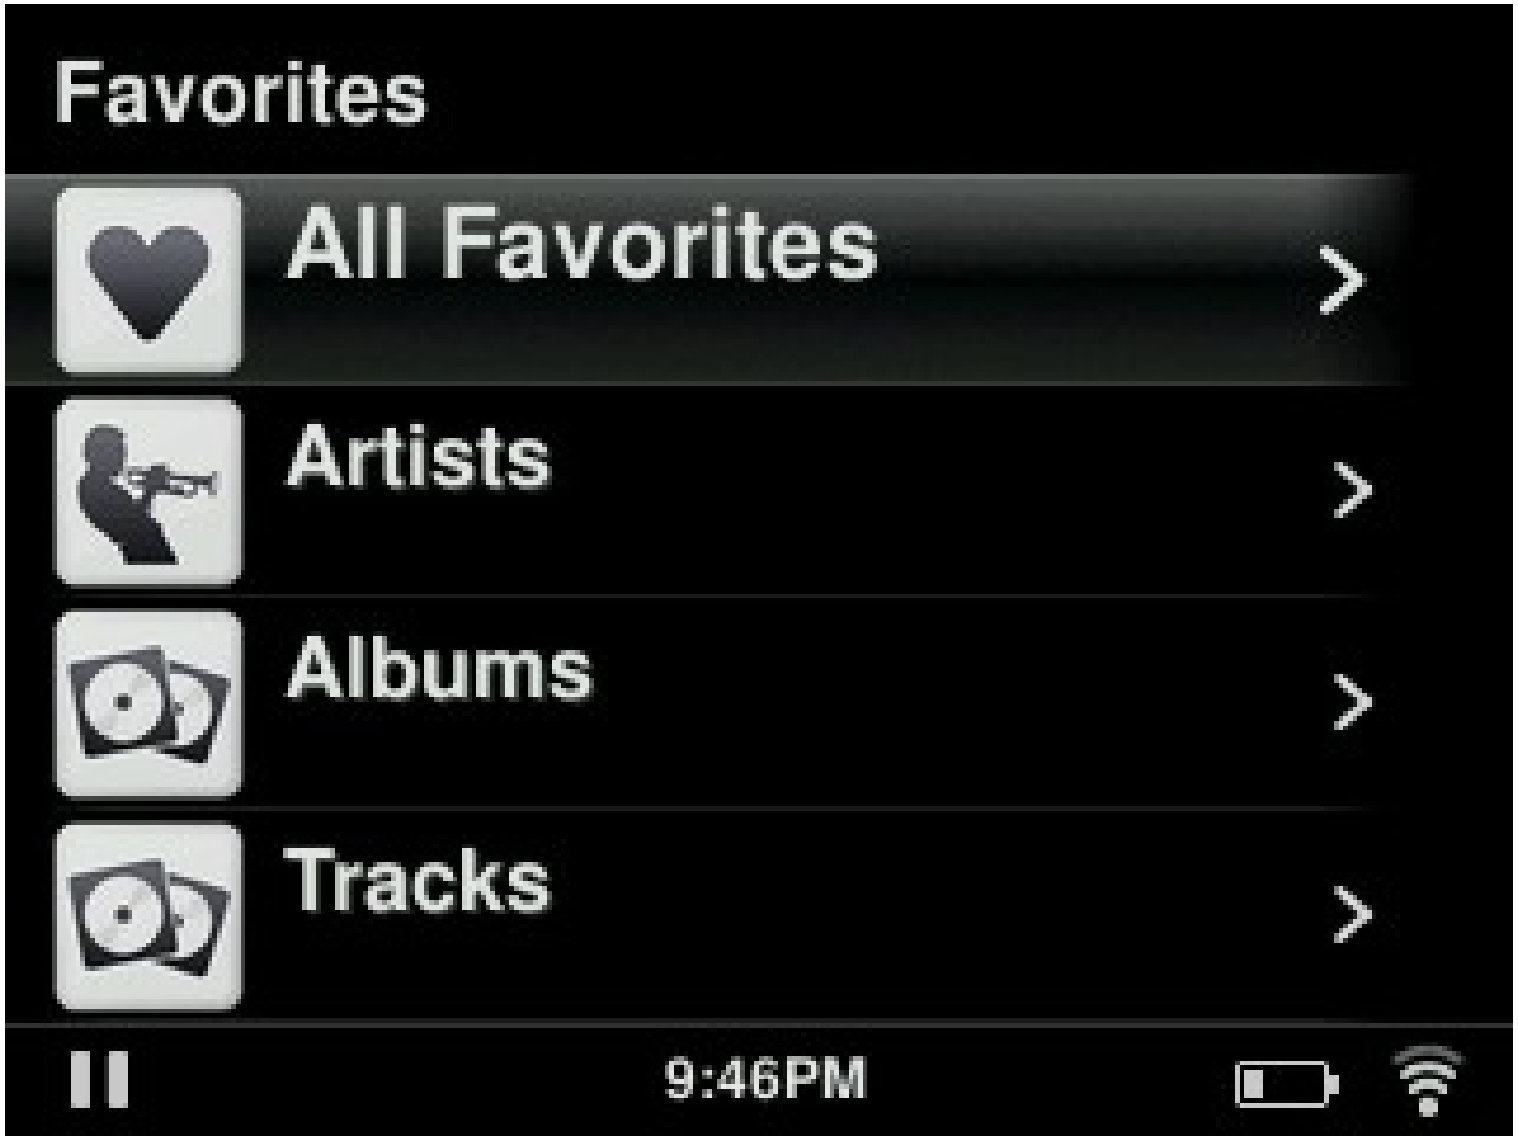

The menu of a queue item (not the one playing or the next): Play Now, Play Next, Move to End and Delete item, as in the Music Assistant app.

My Music

The preset entries come from the player's settings in Music Assistant (favorited playlists and radio stations).

My Music - Favorites

All Favorites, then one entry per type.

My Music - Artists

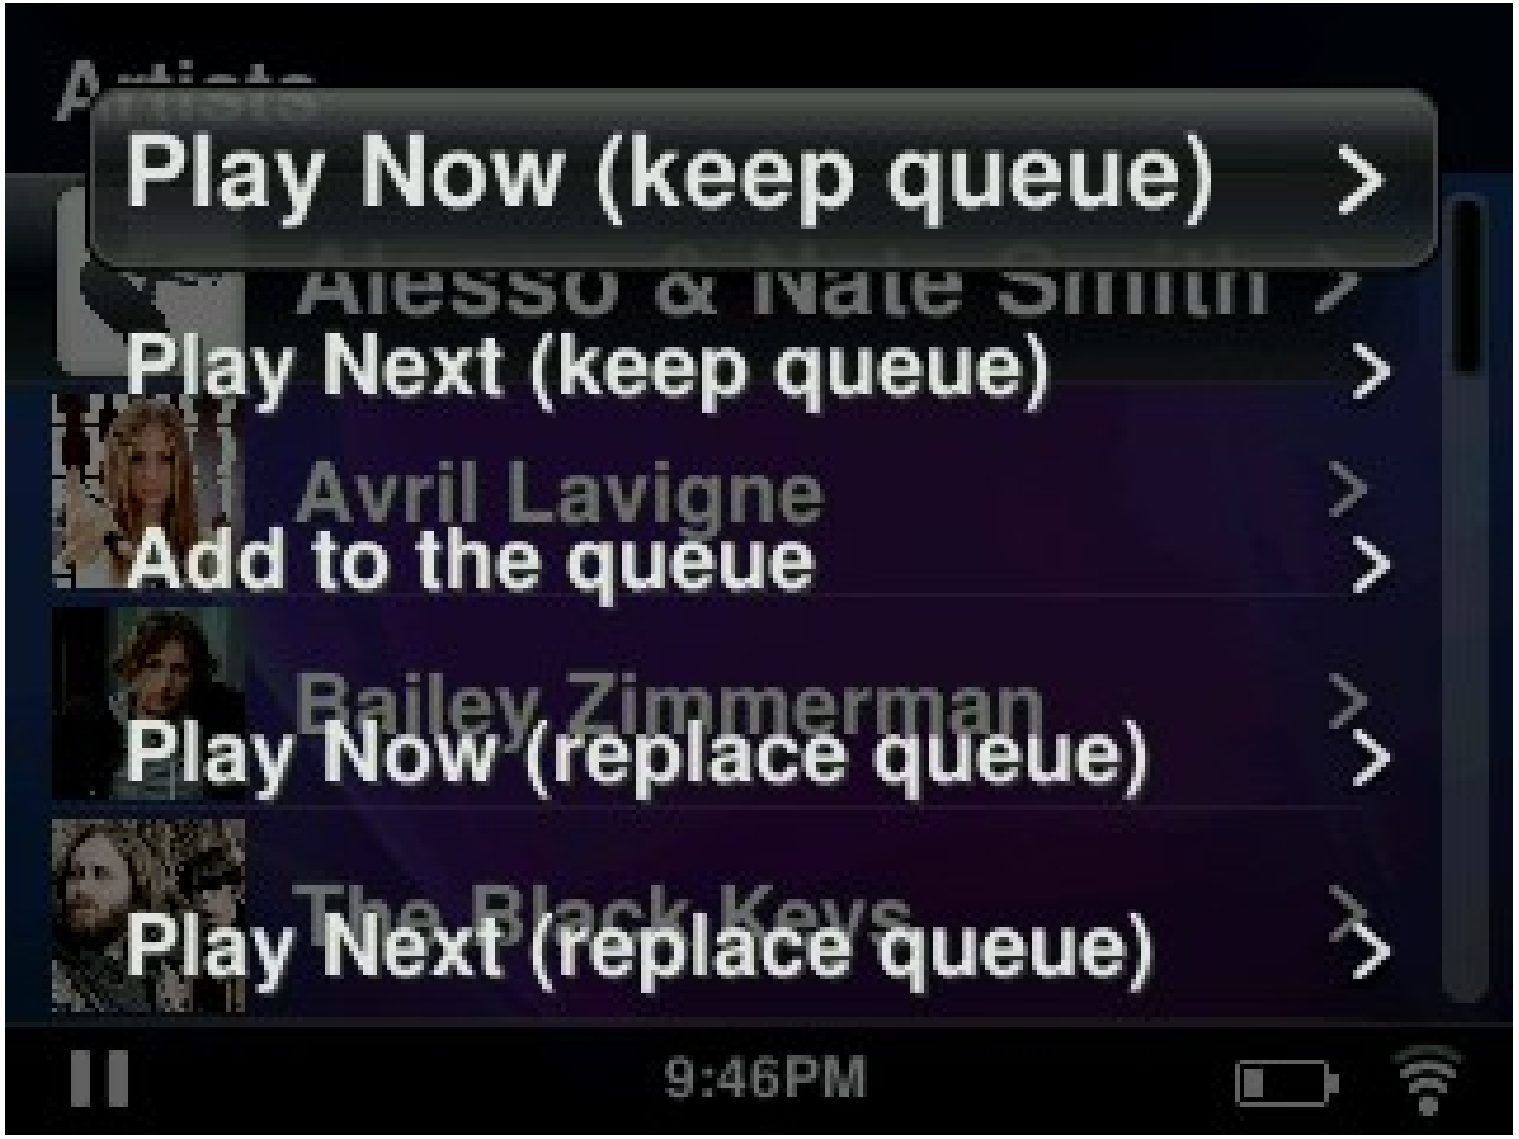

My Music - Artists - Avril Lavigne

An artist who is only on one track (a featured artist). The view lists albums, then tracks not on those albums, then matching radio stations.

Long press on an artist

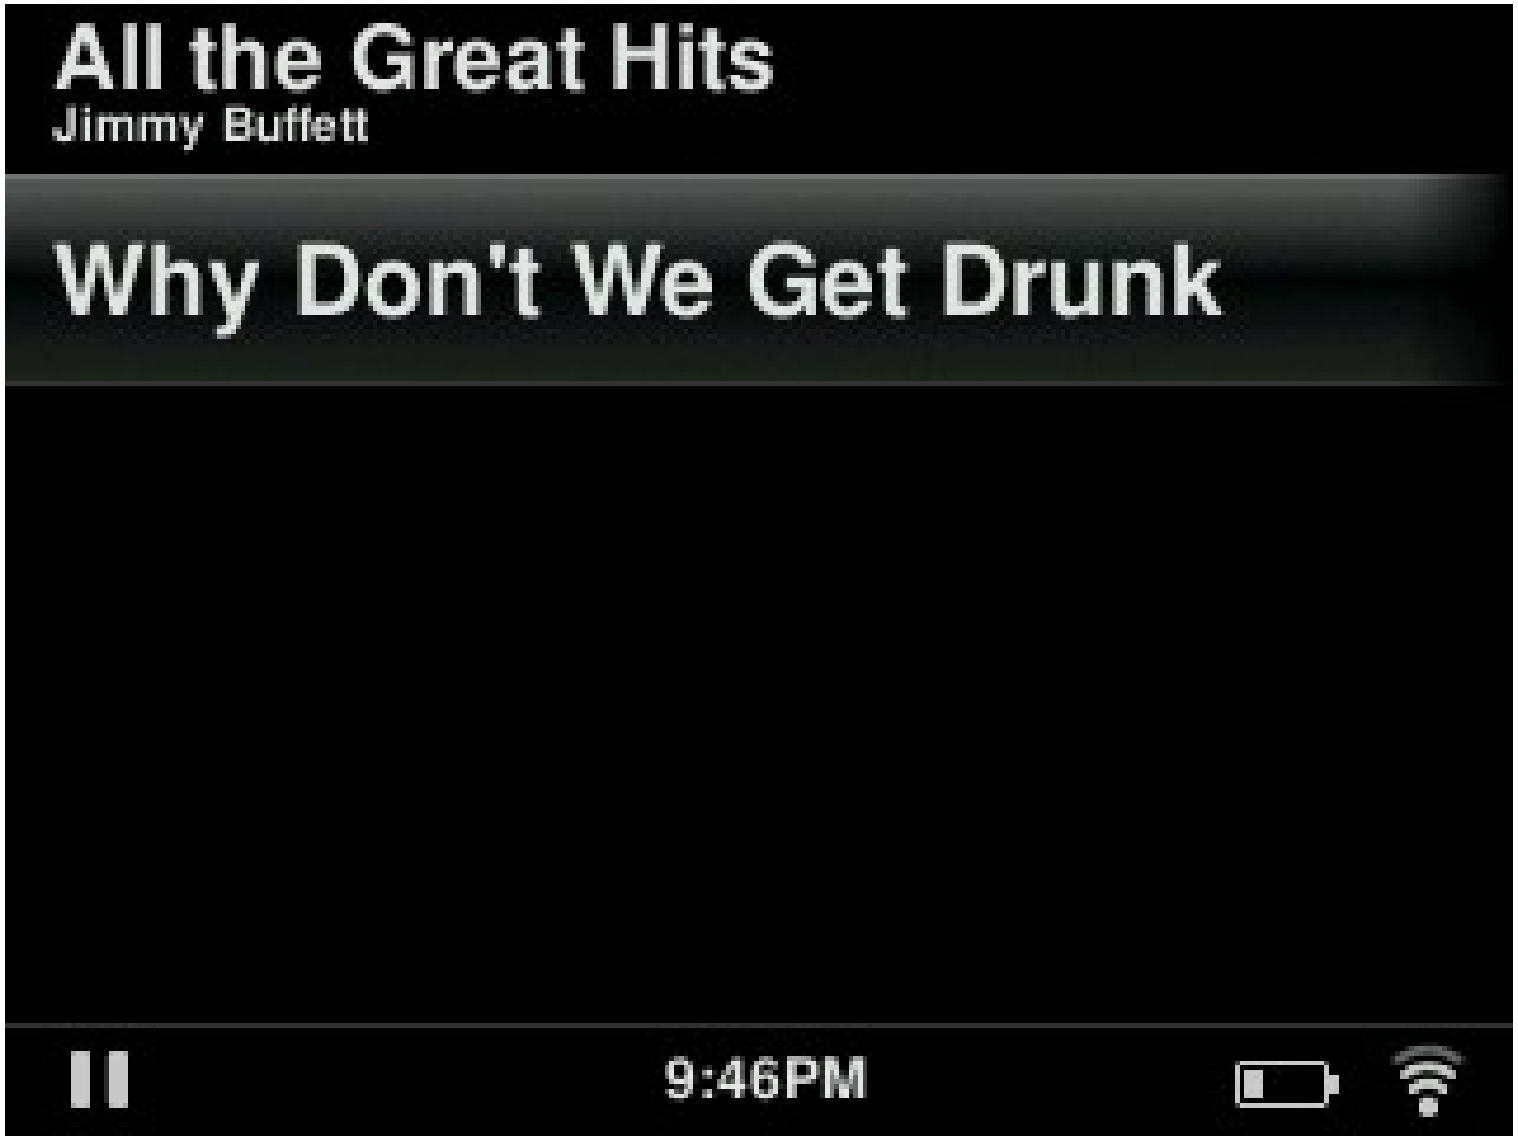

The menu of an artist: play everything by them, add it to the queue, play it next.

My Music - Albums

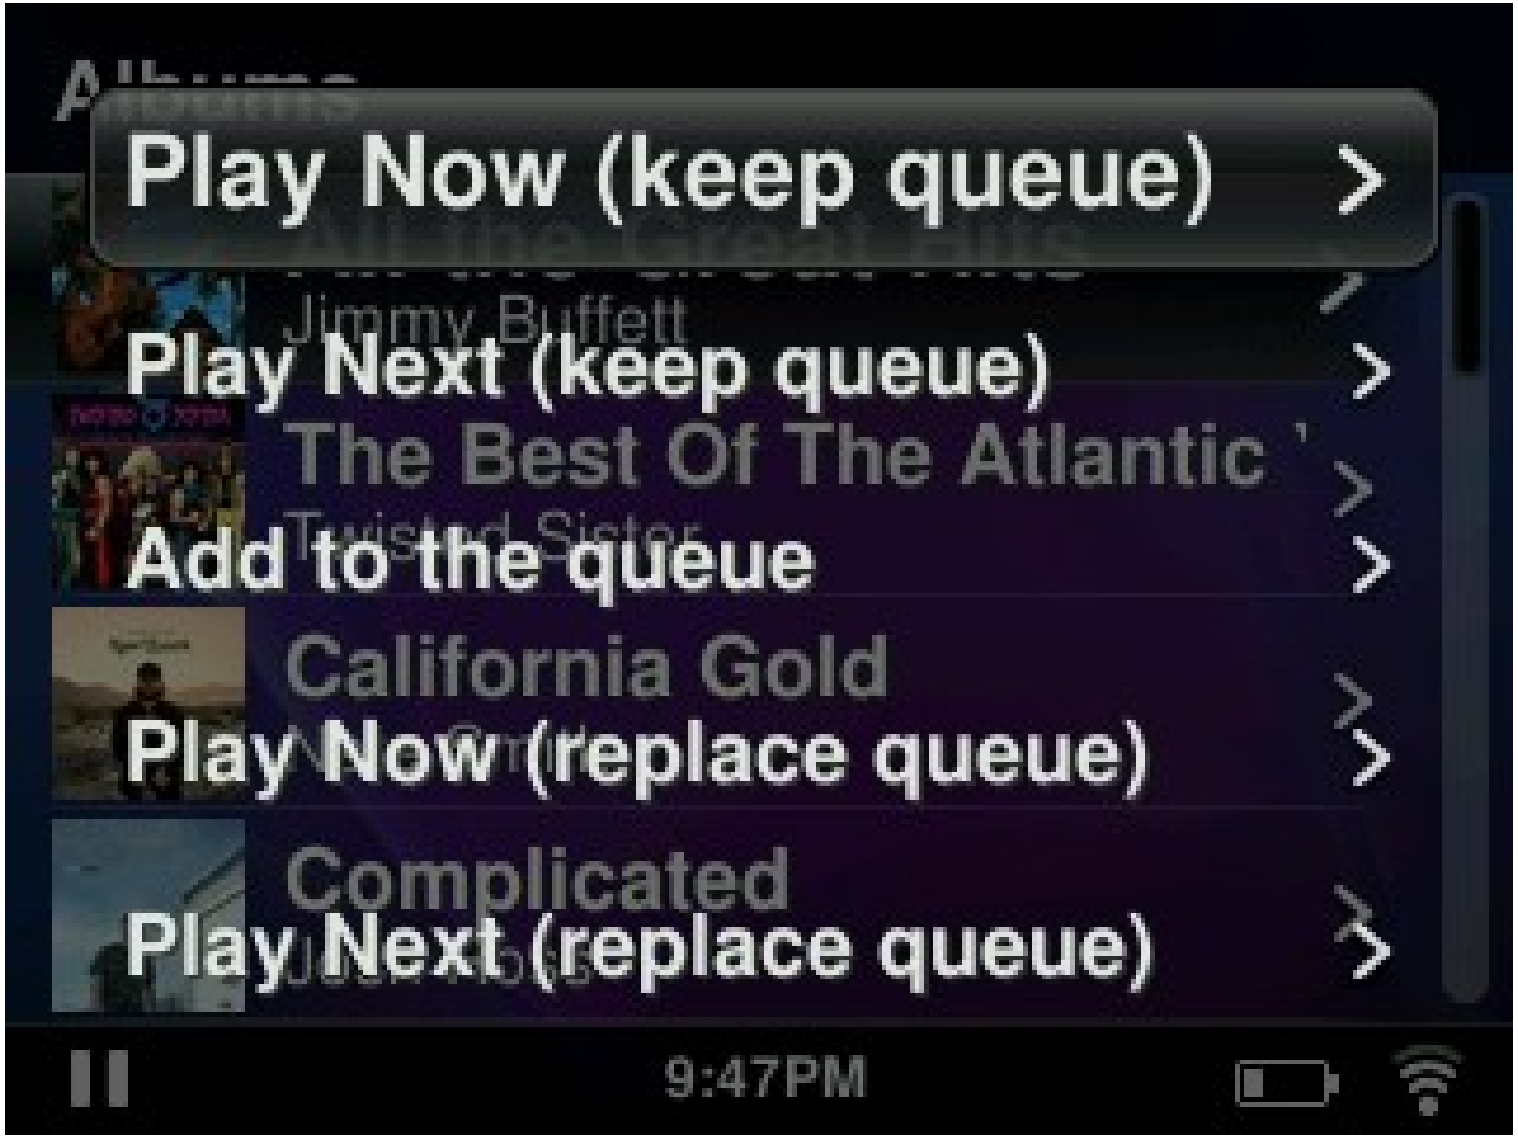

My Music - Albums - an album

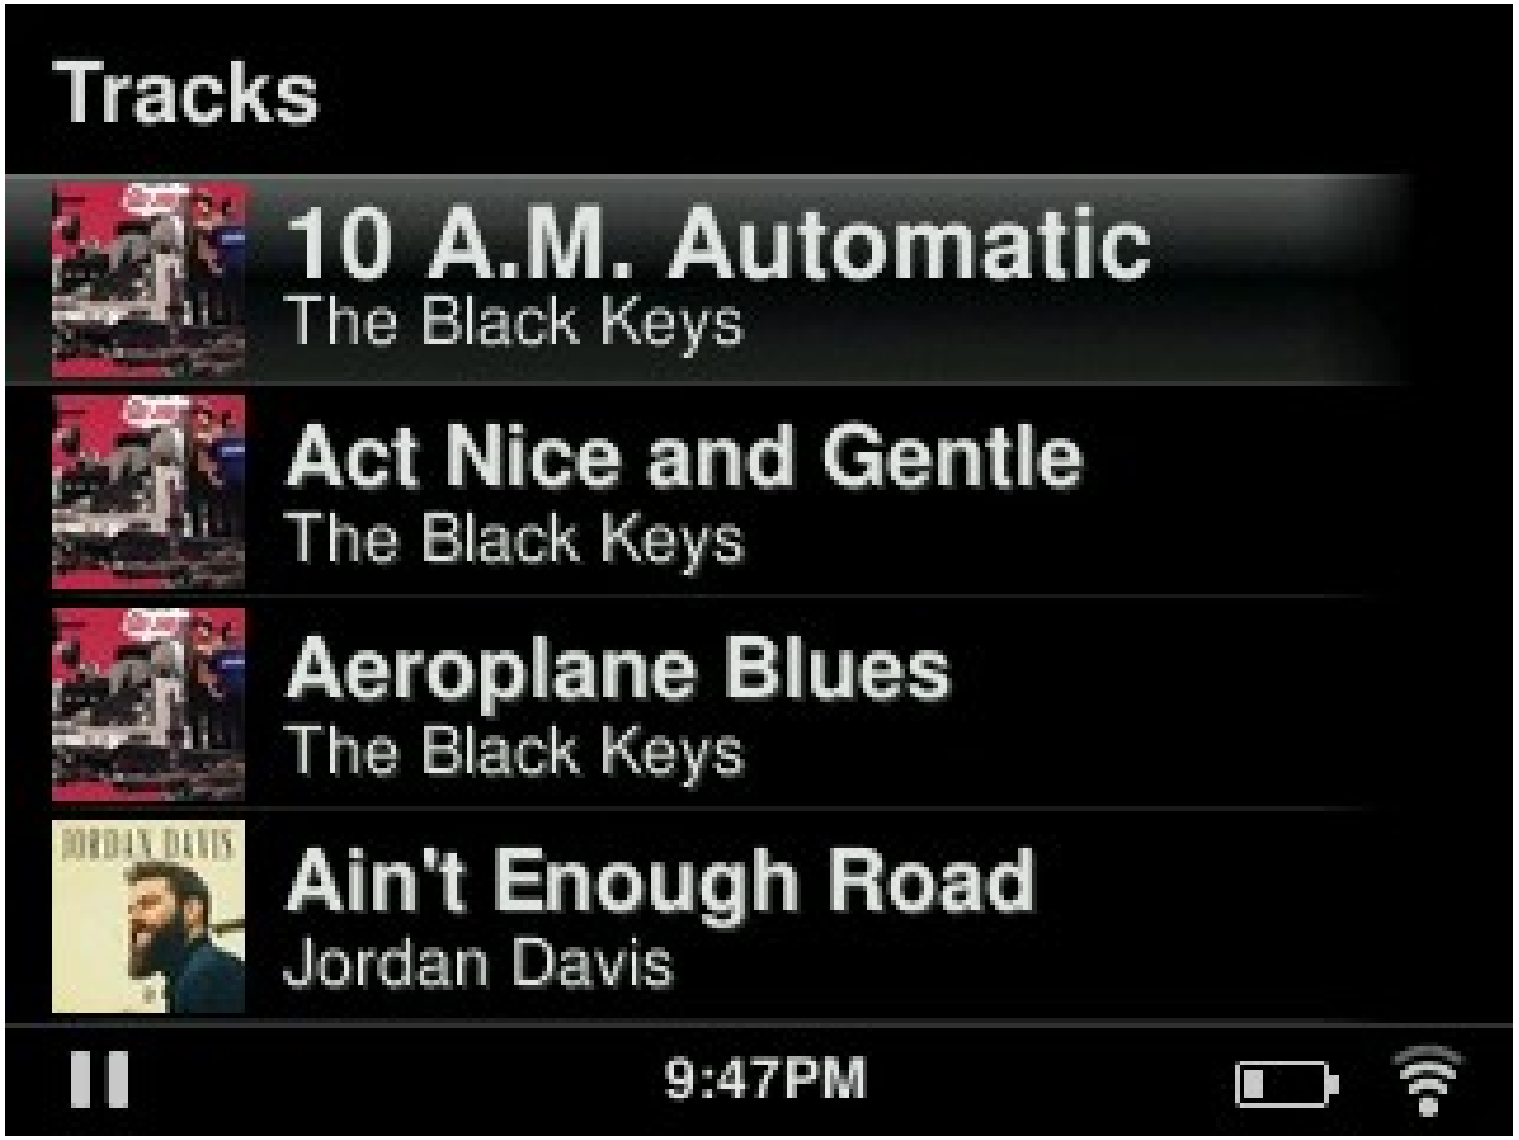

Tracks of one album. Tapping a track adds it (plays it when the queue is idle); long press for Play Album from here.

Long press on an album

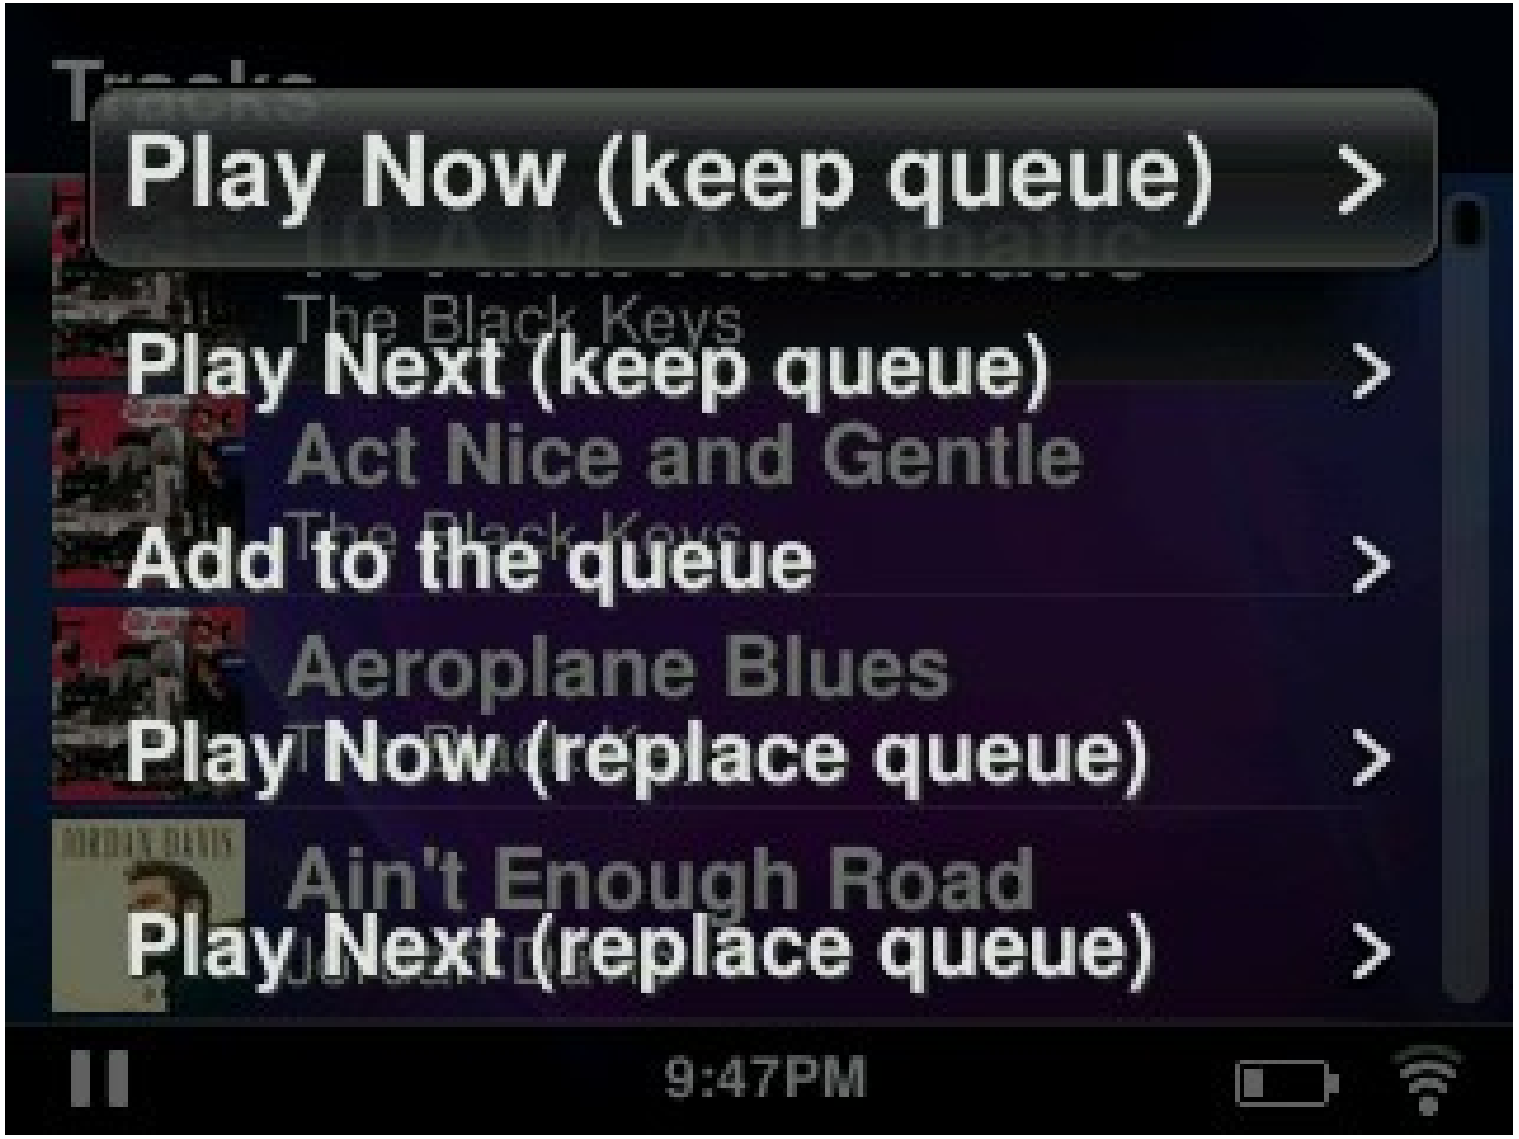

The menu of an album: play it, play it next, add it to the queue.

My Music - Tracks

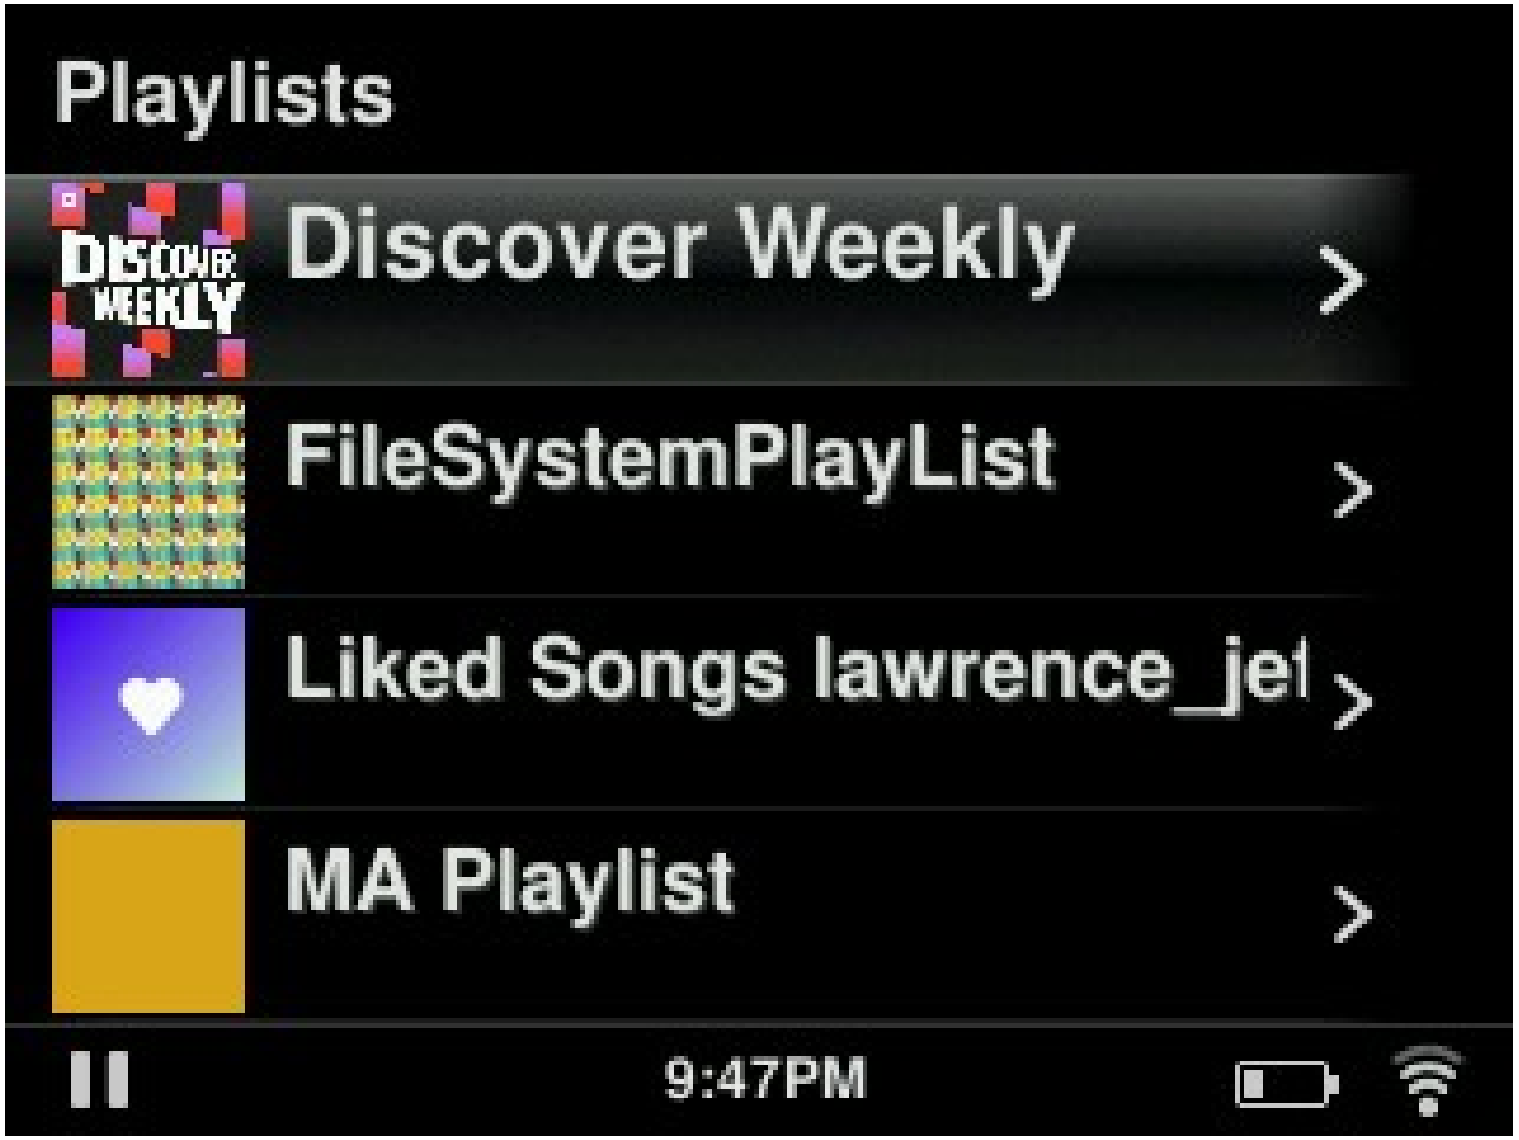

Long press on a track

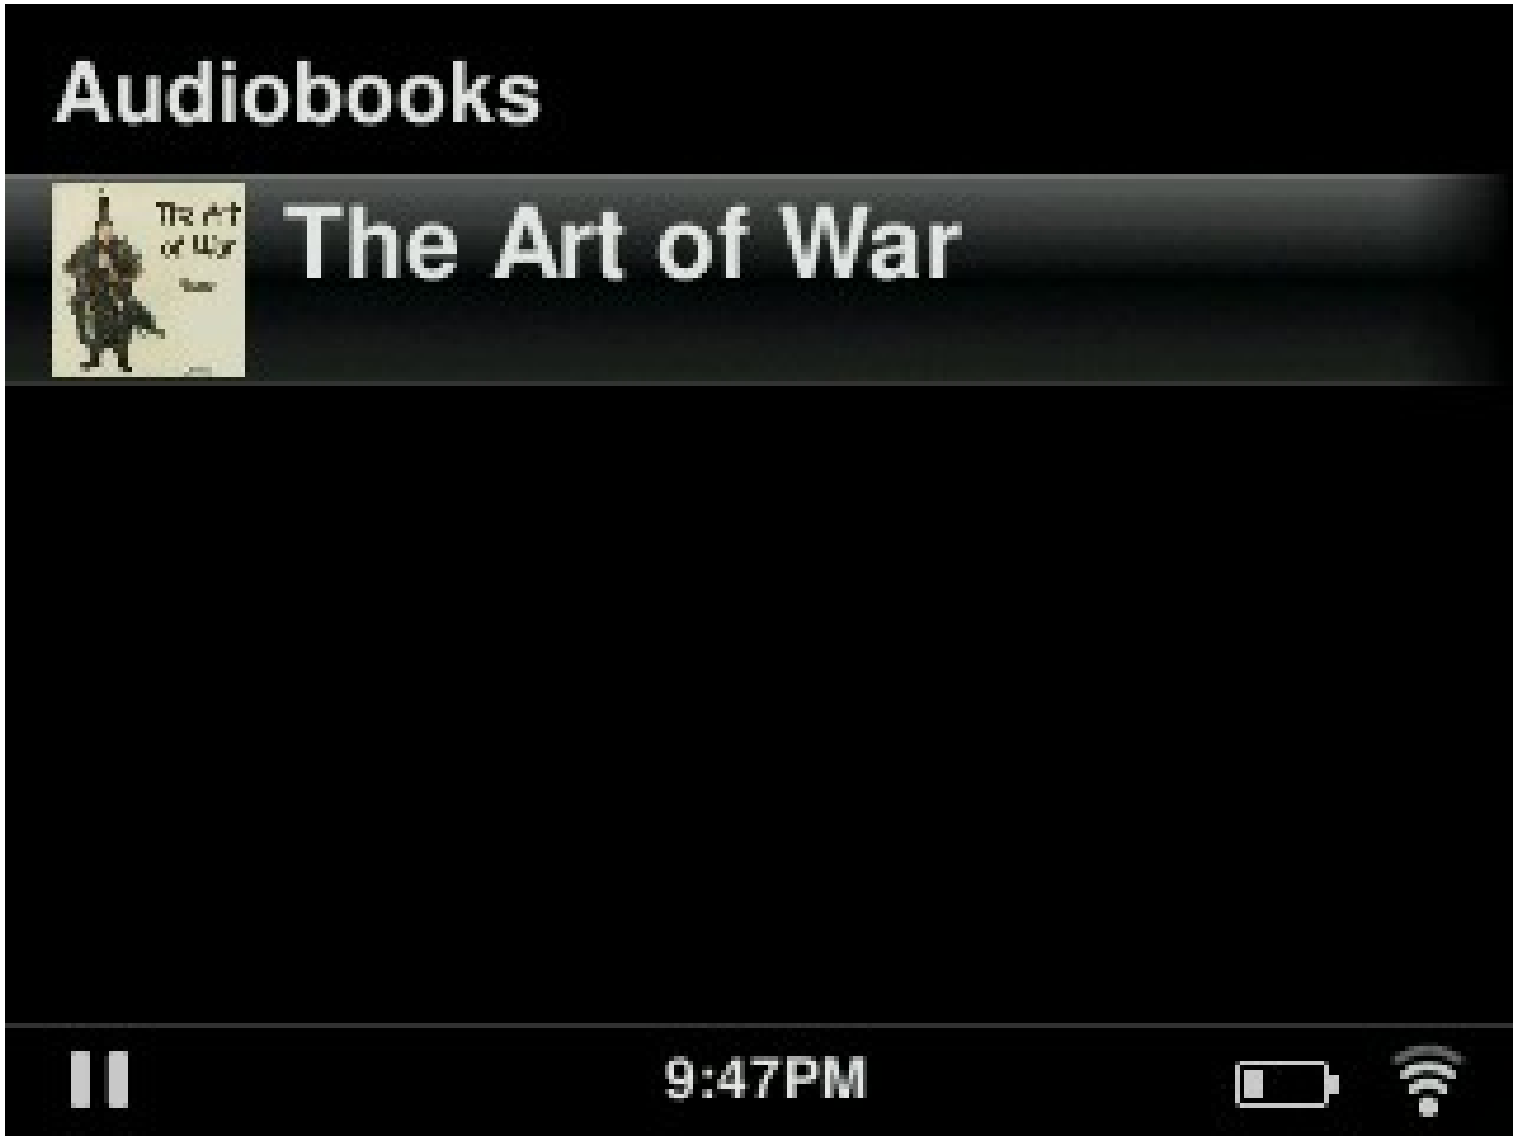

The menu of a track: play now, play next, add to the queue, and more.

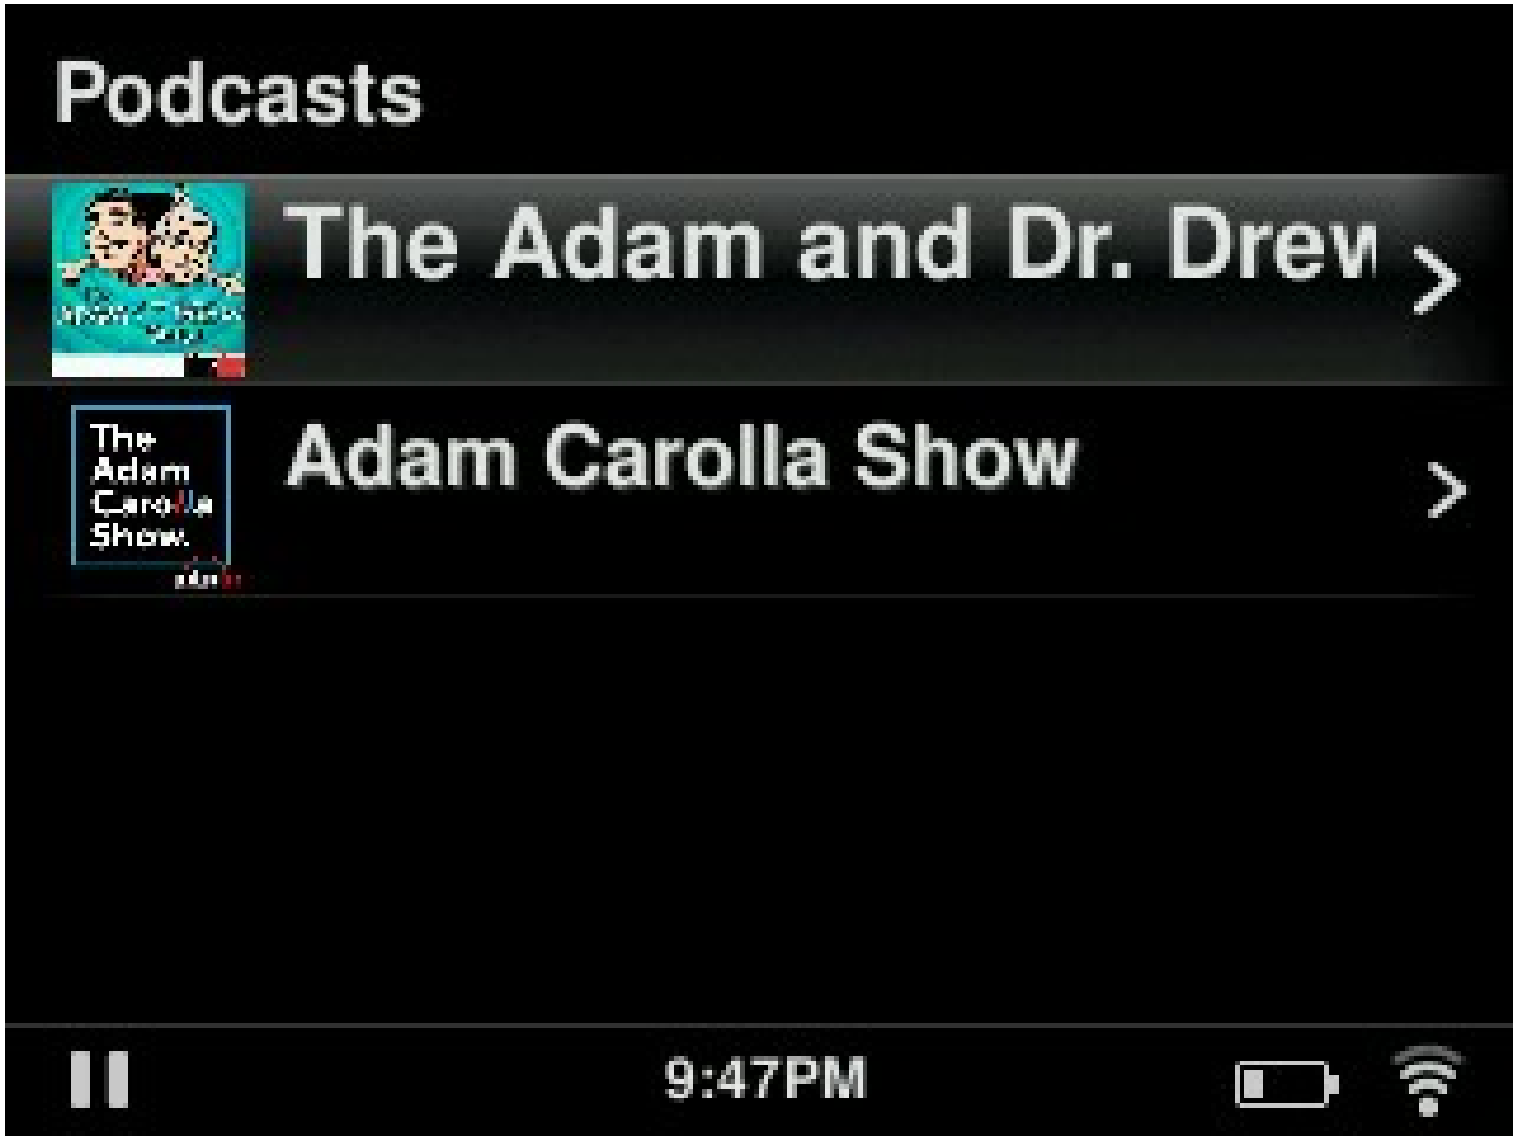

My Music - Playlists

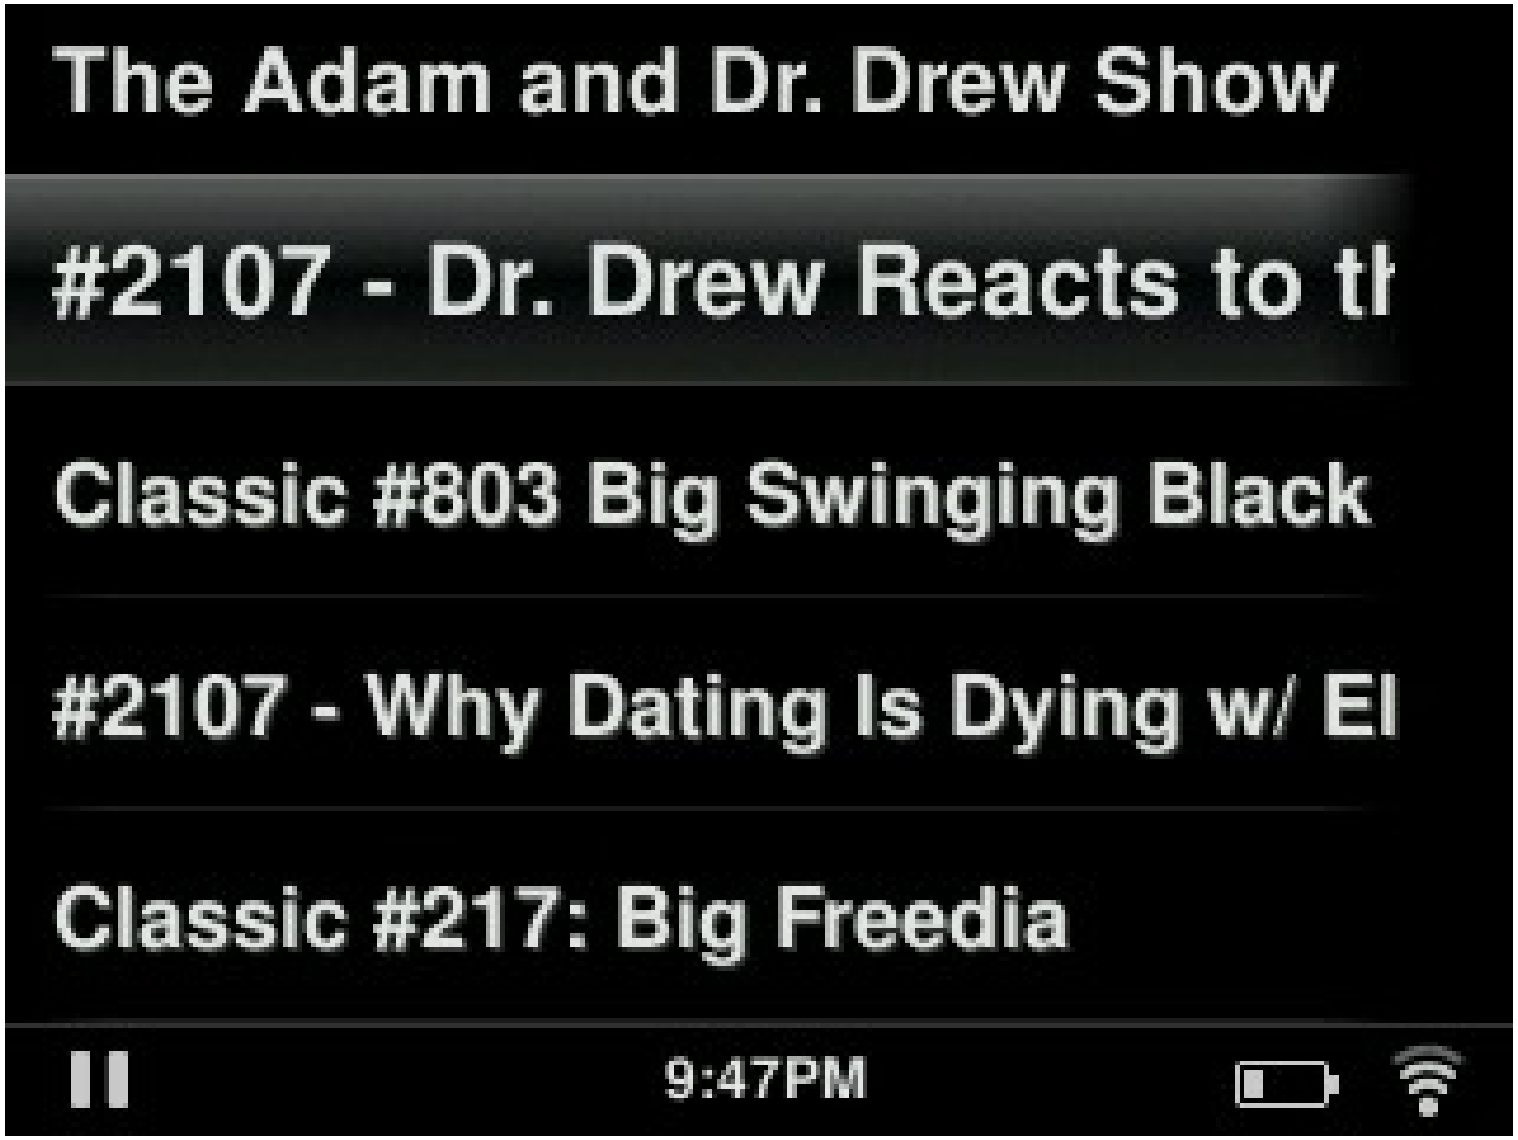

My Music - Audiobooks

My Music - Podcasts

My Music - Podcasts - a podcast

Episodes of one podcast.

My Music - Radio

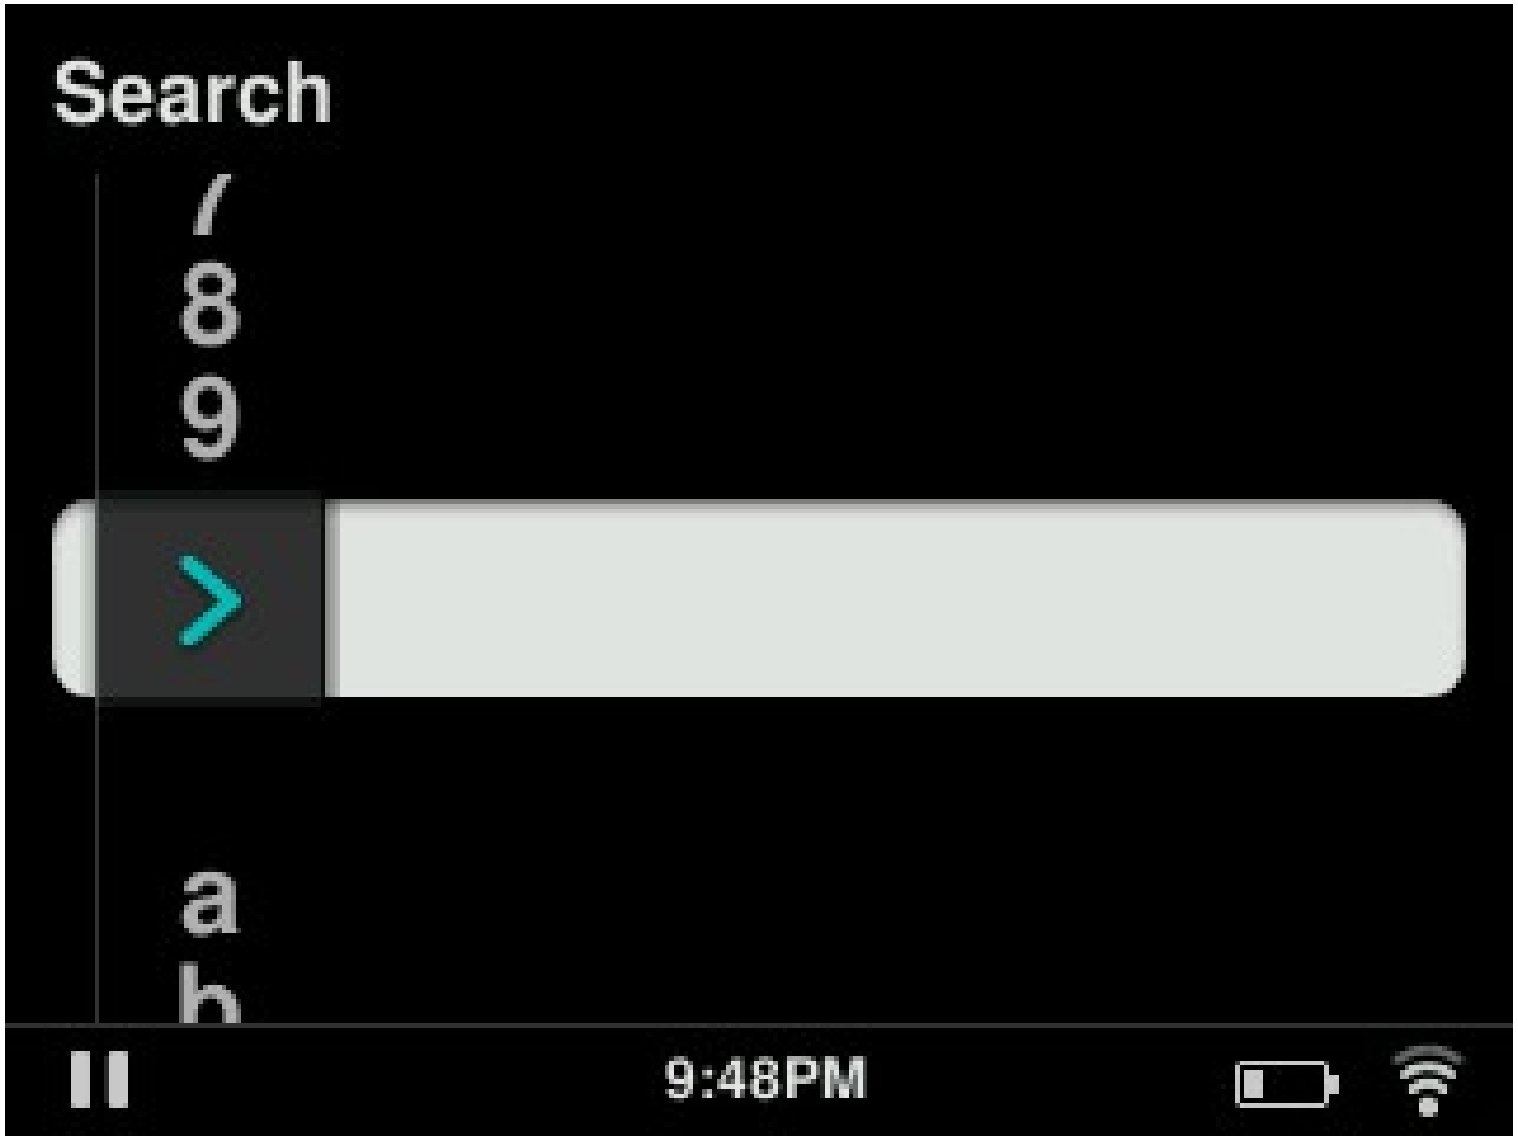

Long press on a radio station

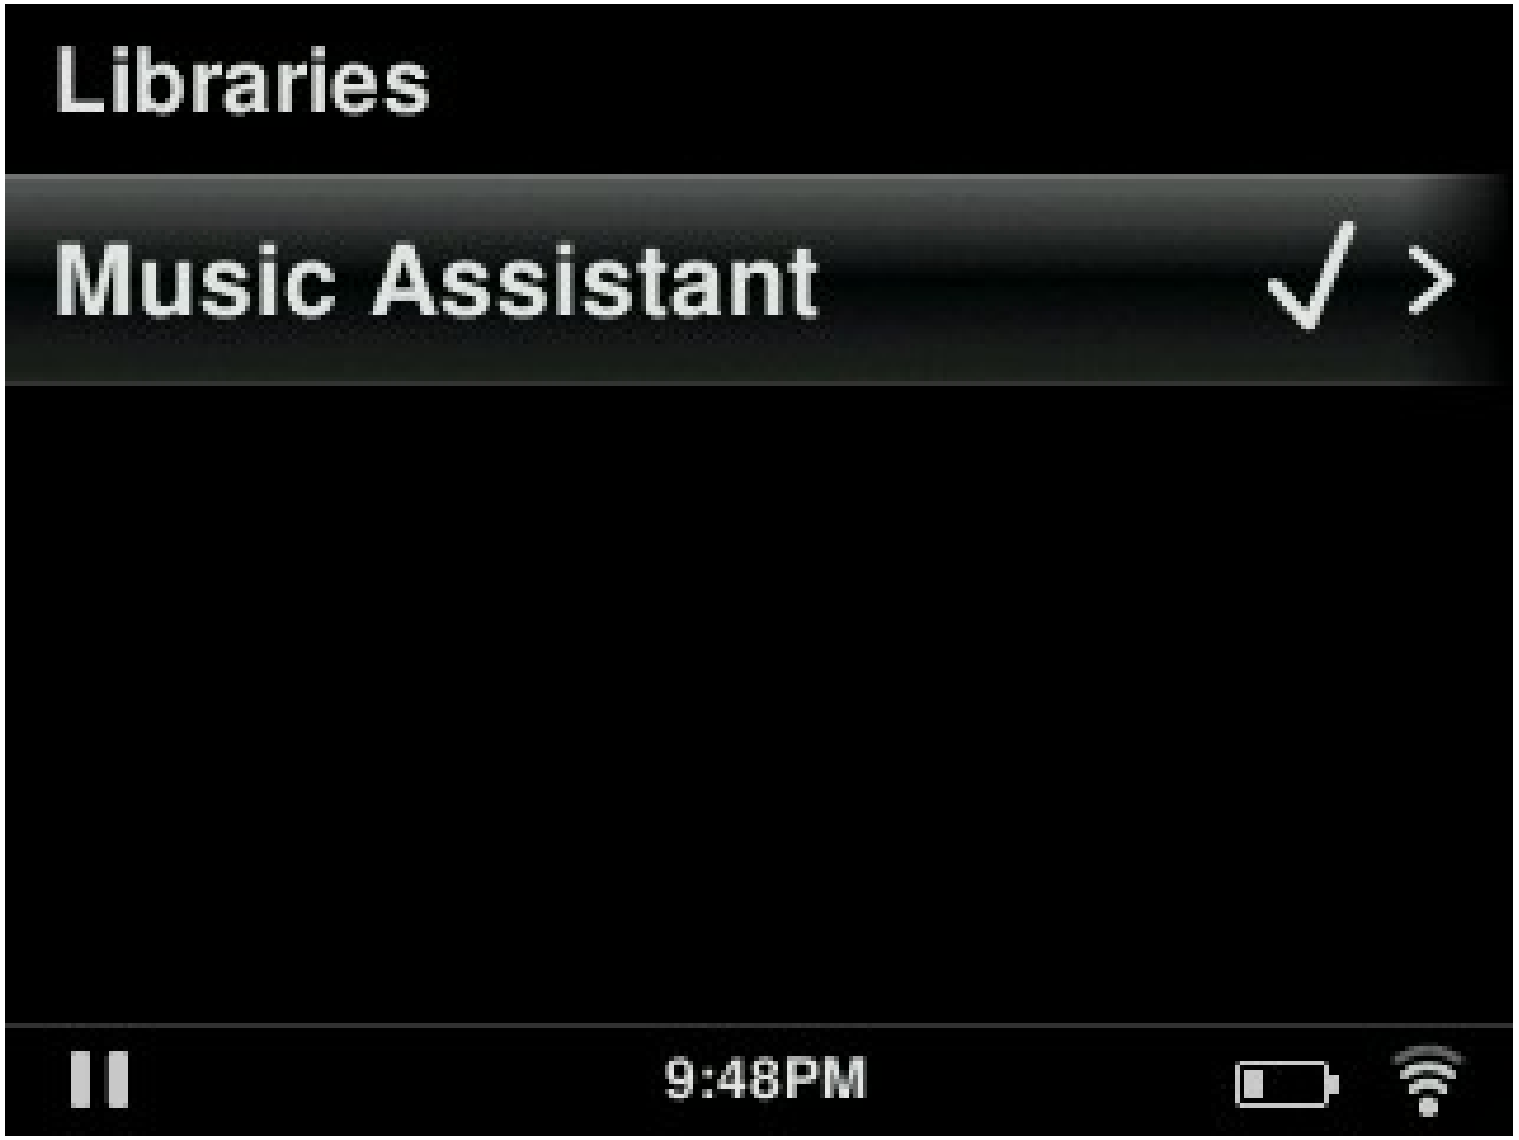

The menu of a radio station.

My Music - Search

The search text entry.

My Music - Switch Library

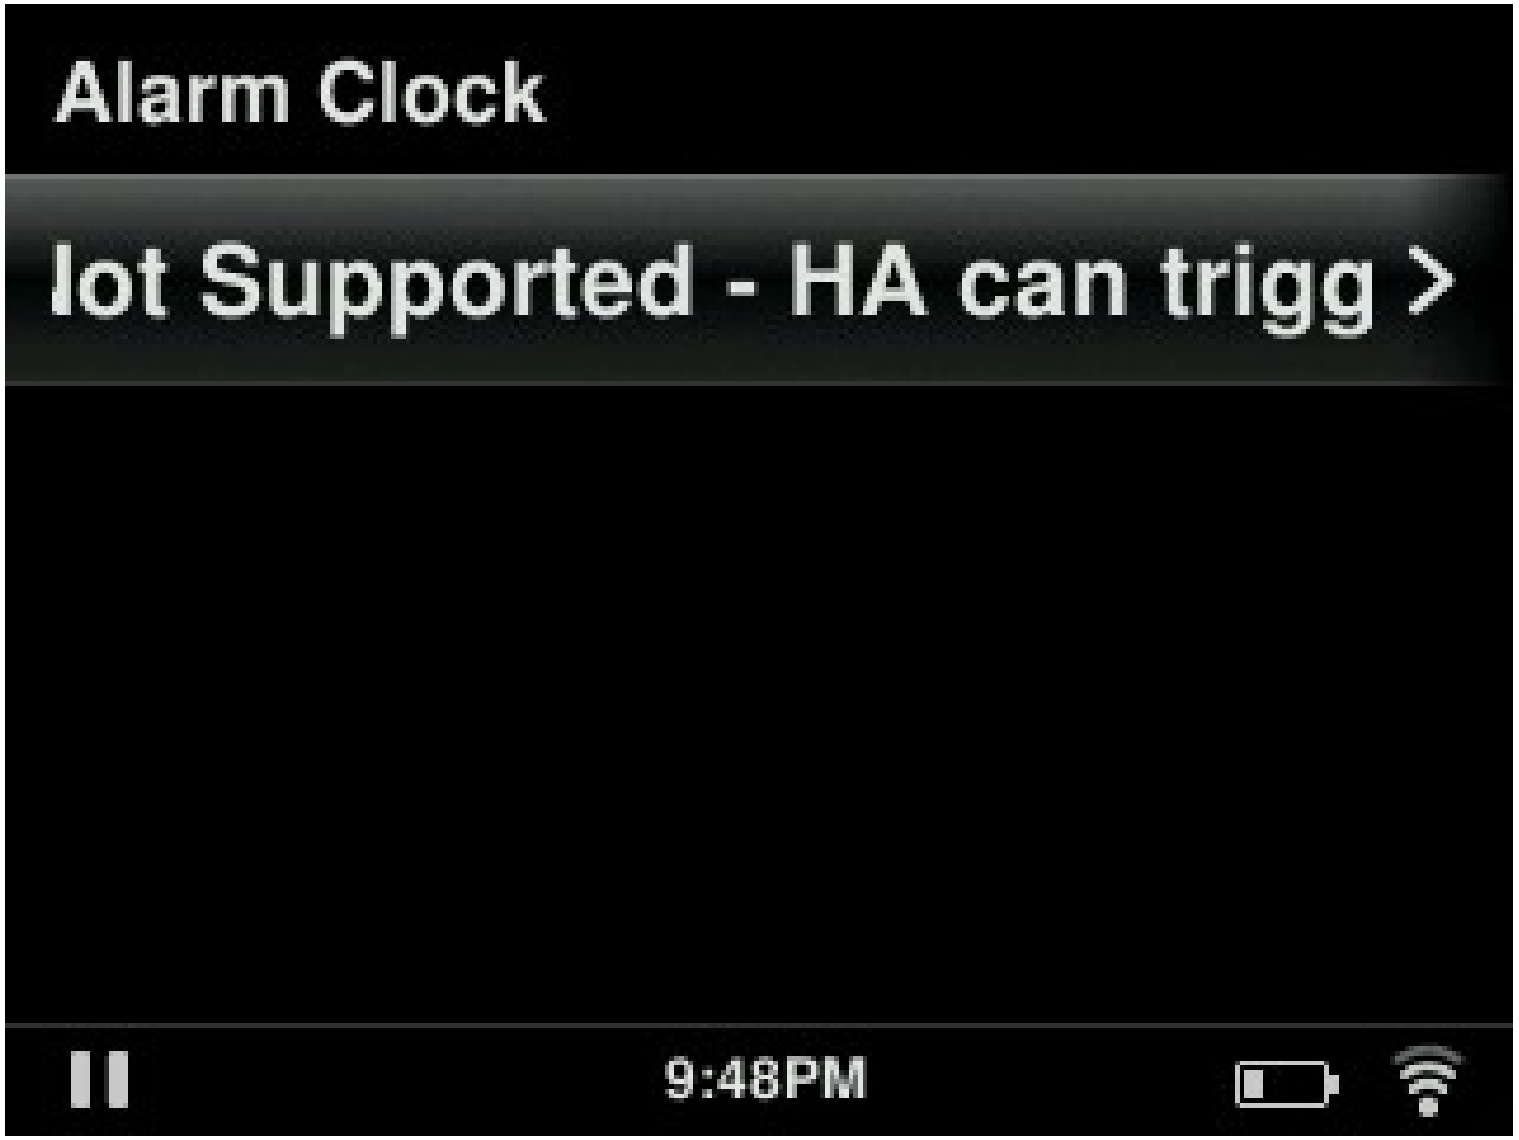

Settings

Includes Alarm Clock (says alarms are not supported) and HA Extras.

Settings - Alarm Clock

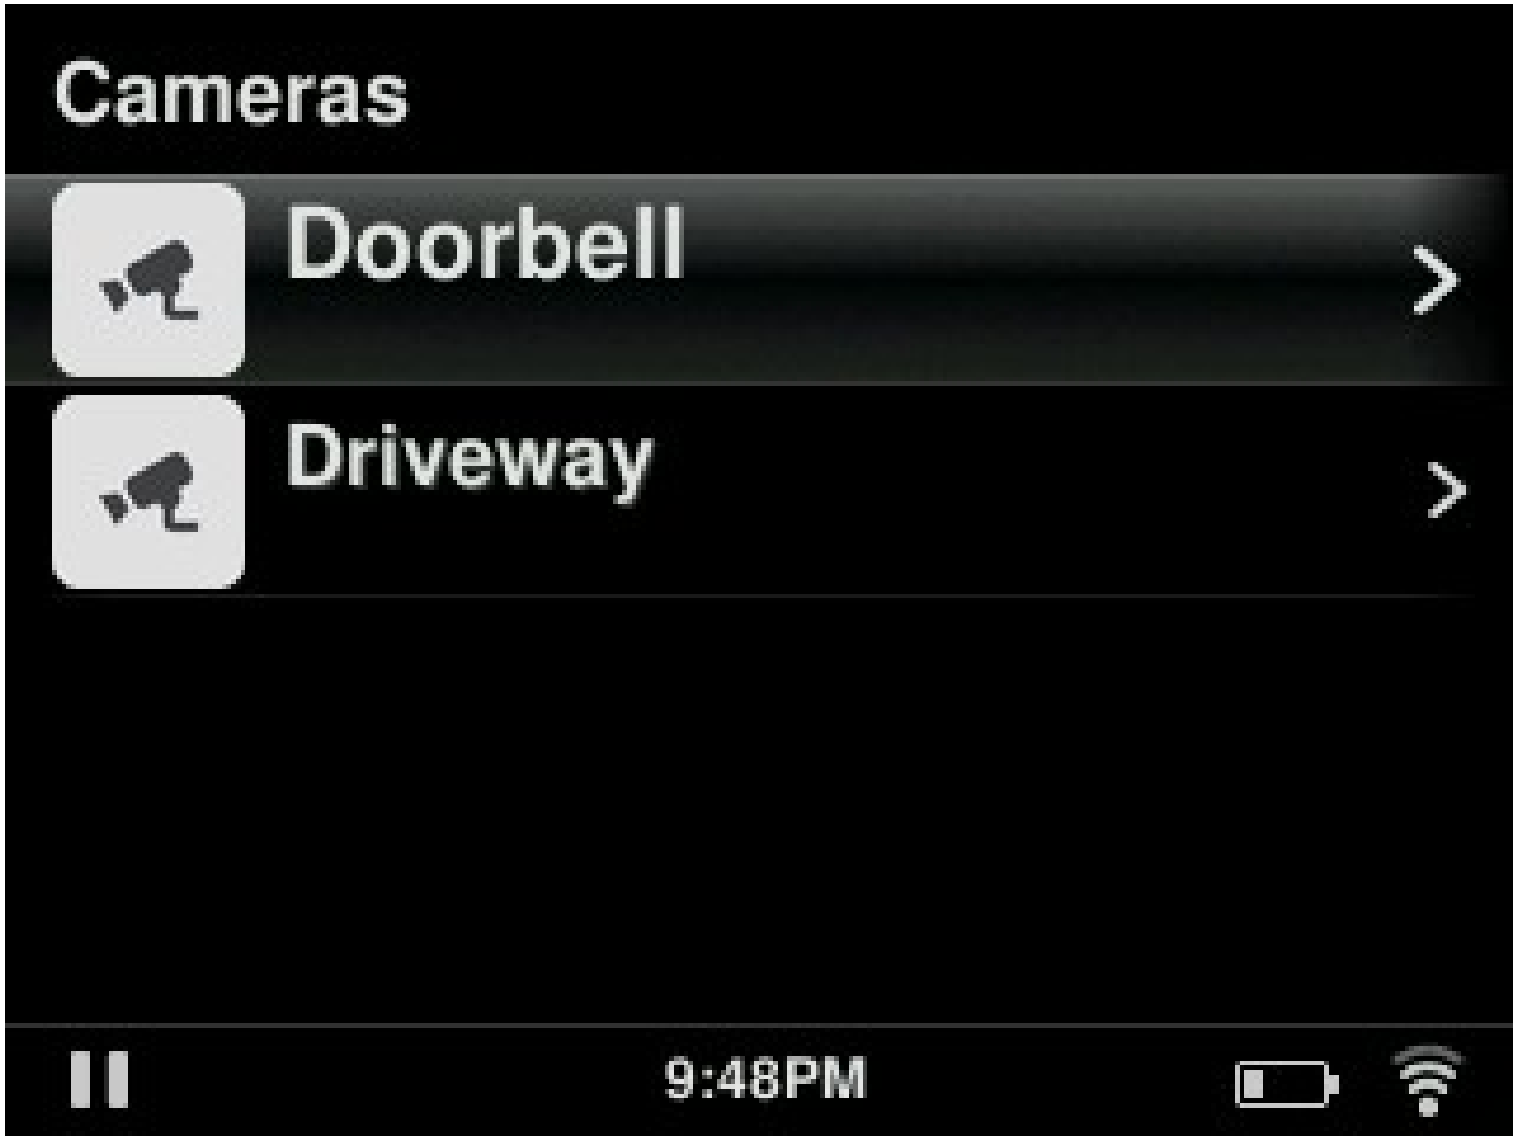

Alarms are not supported; Home Assistant can trigger them with an automation.

Settings - HA Extras

Experimental. Needs the device setting 'Expose HA Entities to Device (HA Extras)' and the HA Extras label on the entities.

Settings - HA Extras - Cameras

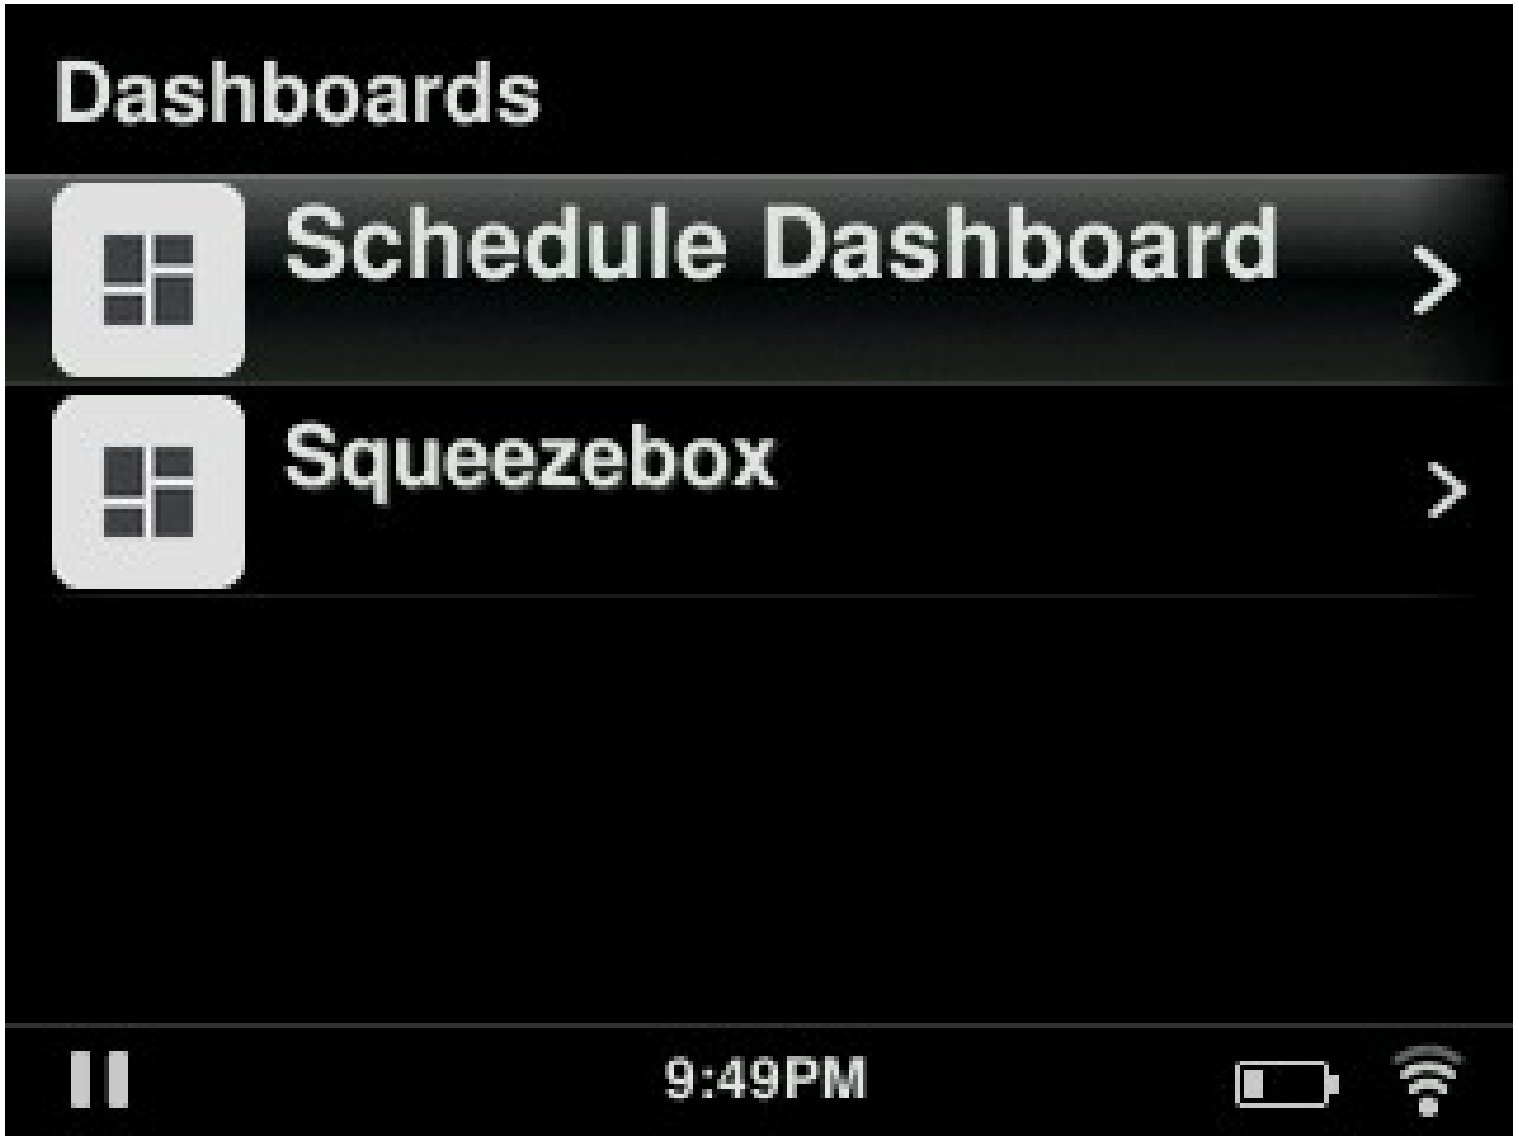

Choosing a camera shows a snapshot full screen in the Image Viewer, refreshed about every 10 seconds.

Settings - HA Extras - Cameras - a camera

The camera view in the Image Viewer. It fetches a new snapshot about every 10 seconds until a key is pressed.

Settings - HA Extras - Dashboards

Entities whose state is the address of a picture of a dashboard. Shown full screen like the cameras.

Settings - HA Extras - Dashboards - a dashboard

A dashboard in the Image Viewer. A screenshot service renders the picture; it is fetched again about every 10 seconds.

Settings - HA Extras - Controls

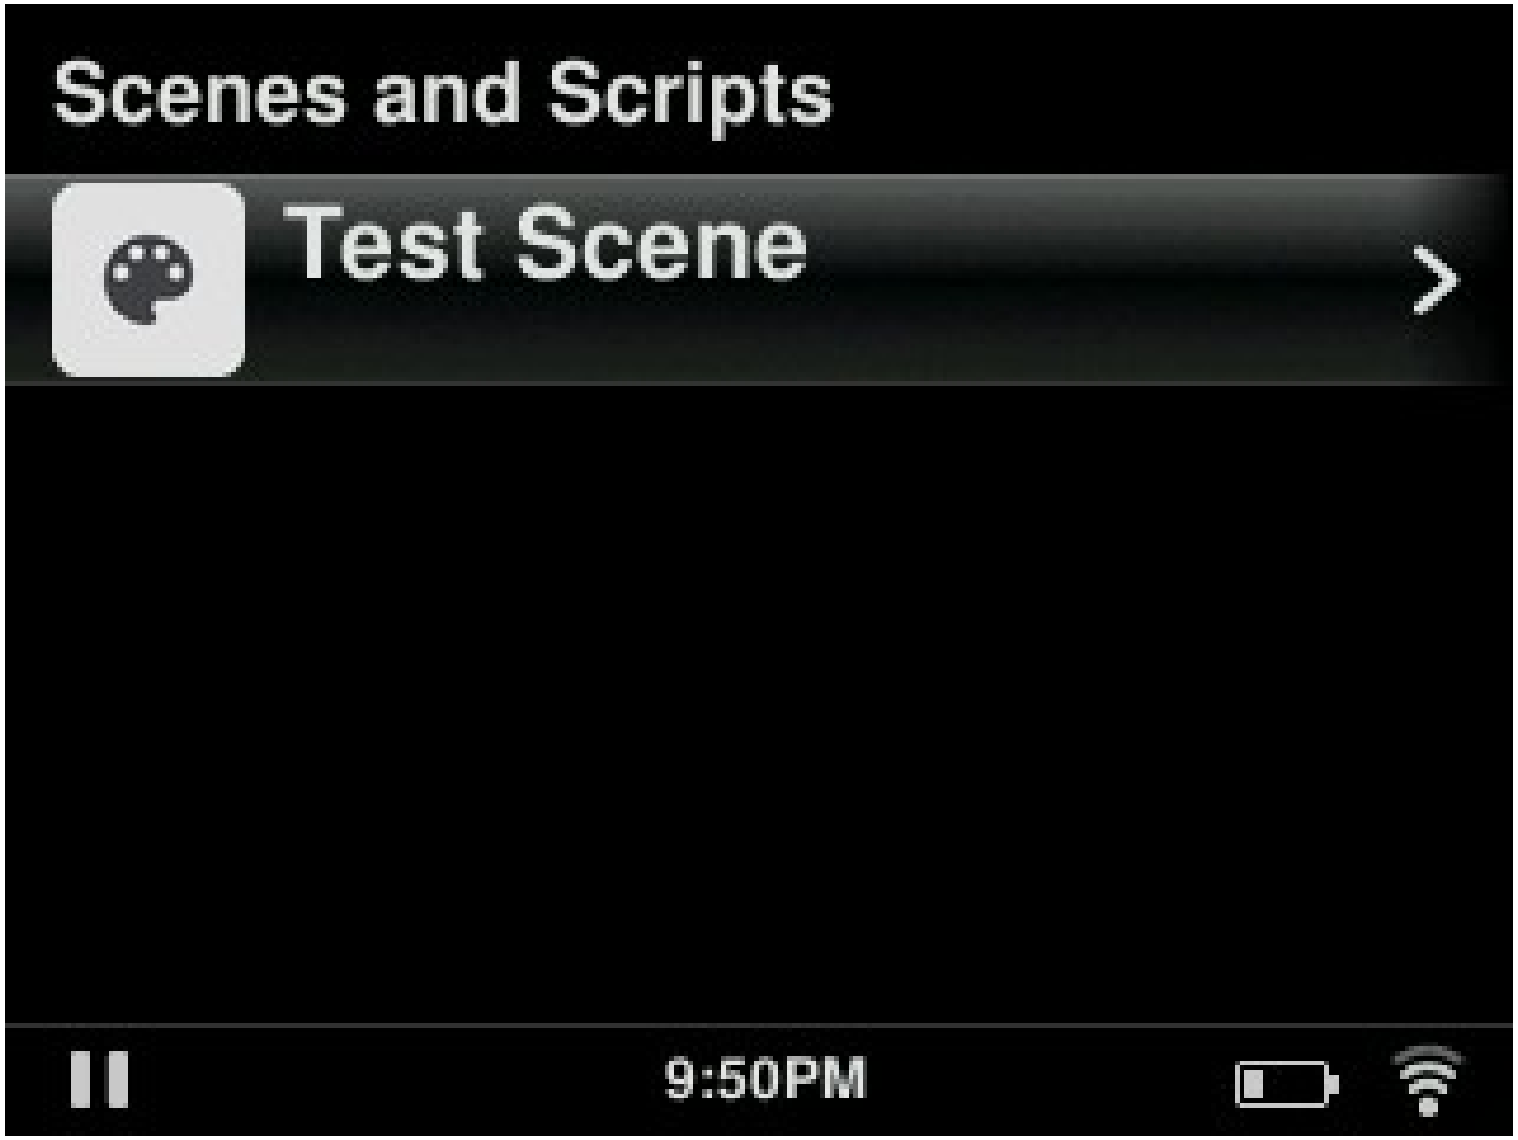

Choosing a row opens Turn On / Turn Off / Cancel.

Settings - HA Extras - Controls - a control

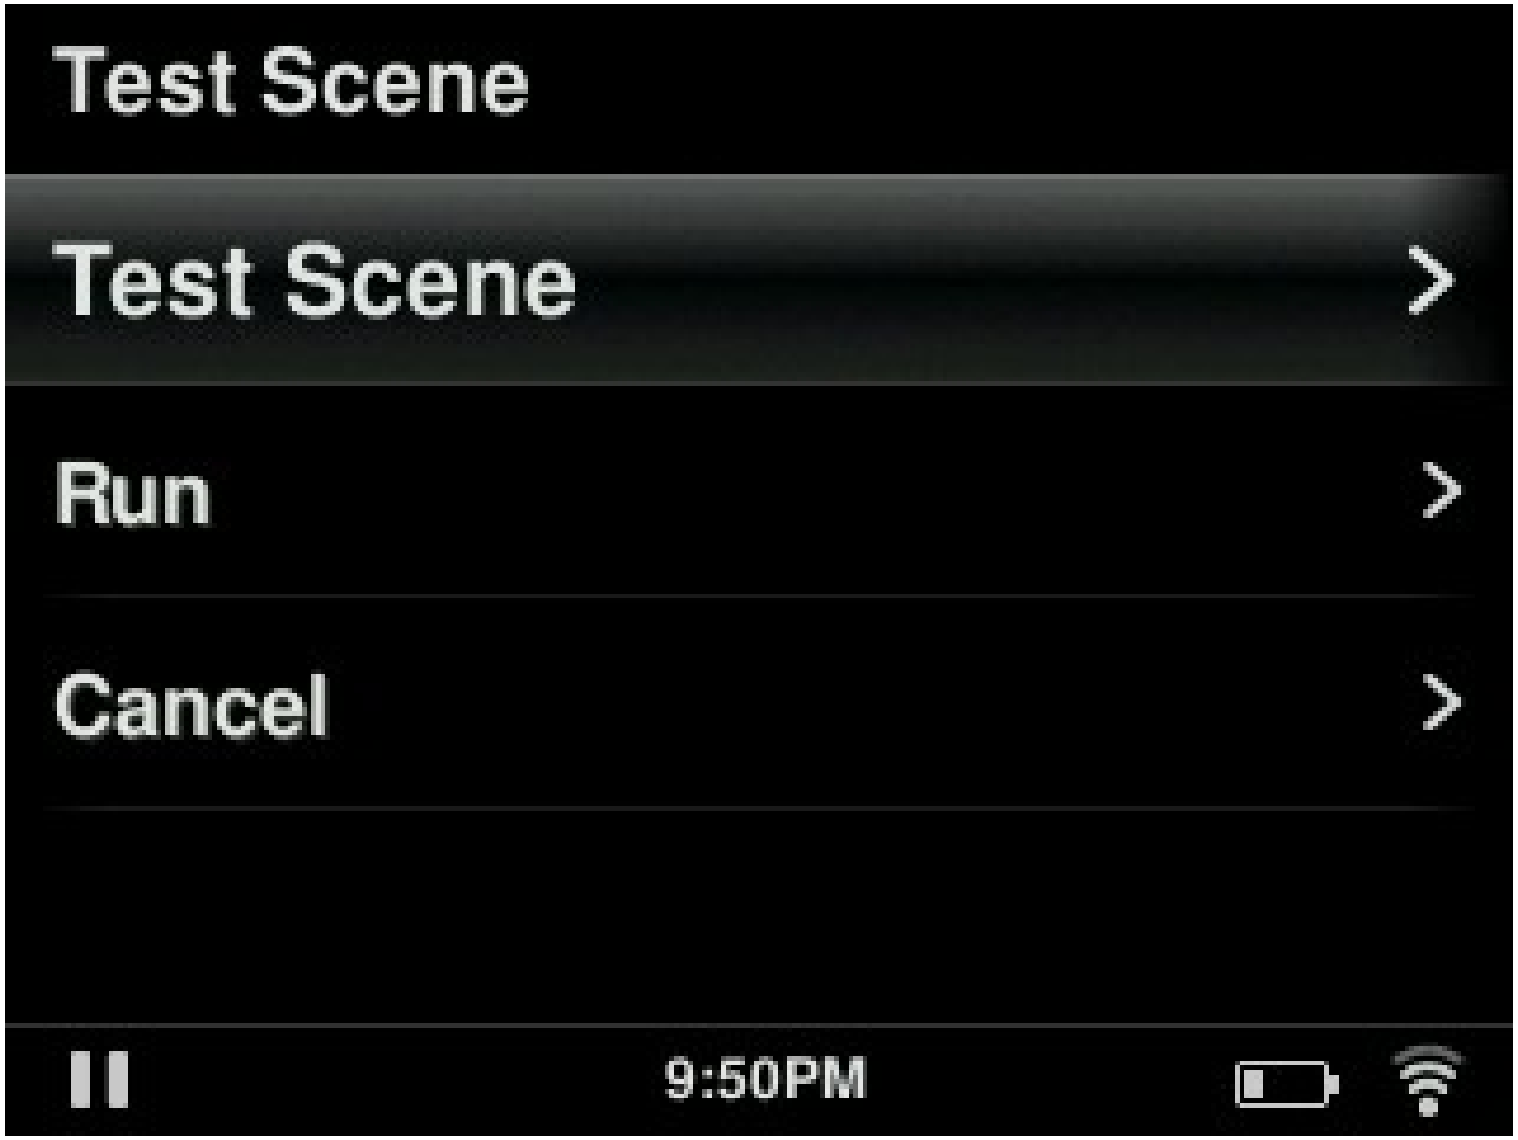

Choosing a control opens its menu: the current state, Turn On, Turn Off and Cancel.

Settings - HA Extras - Scenes and Scripts

Choosing one opens Run / Cancel.

Settings - HA Extras - Scenes and Scripts - a scene

Choosing a scene opens Run and Cancel.

Settings - HA Extras - Status

Read-only values.
